DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a recording/reproducing apparatus, classified in class 369, subclass 94.
- II. Claim 6, drawn to a recording/reproducing apparatus, classified in class 369, subclass 47.38.
- III. Claims 7-15, drawn to a recording/reproducing apparatus or an optical head, classified in class 369, subclass 112.01.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as being utilized in a device which does not require that "half of the recording layers have guide grooves formed in a reverse spiral direction to that of the other half" as required by invention II. Moreover, invention II has separate utility such as being utilized in a device which does not require that the "plurality of optical heads are assigned to reproduce information from or record information in different recording layers respectively" as required by invention I. See MPEP § 806.05(d).

Art Unit: 2653

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as being utilized in a device which does not require that the "optical head comprises a single objective lens and a plurality of light sources and an optical path correction system" as required by invention III. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as being utilized in a device which does not require that the "optical head comprises a single objective lens and a plurality of light sources and an optical path correction system" as required by invention III. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was not made to the applicants' representative to request an oral election to the above restriction requirement due to the nature of the application, i.e., foreign applicants, and the need for the examiner to promptly act on the application.

Art Unit: 2653

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul W. Huber whose telephone number is (703) 308-1549.
